

# WinPICS™

## Complete Seismic Interpretation and Visualization Workstation

**With an extensive range of exploration tools, WinPICS 5.9 is designed to help you hit your exploration targets.**

WinPICS offers easy to use data management tools from import to presentation mapping. Featuring sophisticated query and mapping capabilities to visualize your exploration and interpretation projects, WinPICS is modeled on industry workflows to deliver a smooth user experience, complete with prompt display updates and intuitive management of data and mapping layers.

### The WinPICS Advantage

#### BENEFITS

#### FEATURES

##### INCREASED PRODUCTIVITY

- Streamlined data posting and display with straightforward well data and map overlays
- Time slice organization provides on-map slice views of multiple data volumes
- Extremely fast display load time and navigation through seismic data elements

##### INNOVATIVE FUNCTIONALITY

- Sophisticated 2D, 3D and synthetic seismic line tie tools, and advanced wavelet matching capabilities
- Dynamic interaction between horizon attribute calculation and well attribute capture
- User designed workflows for spectral decomposition and similarity mapping
- Utilizes SMAC™ to resolve problems with 2D/3D seismic data matching and synthetic seismograms

##### ADVANCED SOFTWARE INTEGRATION

- Dynamic GeoVista database browser integration within WinPICS using VistaBridge feature
- Real-time integration with SynthSuite for fast, easy and precise modeling and visualization
- Compatible with Microsoft Office applications (Excel and PowerPoint) and Windows drivers
- Software is open to external data solutions available in the exploration software market

# WinPICS™

## Complete Seismic Interpretation and Visualization Workstation

### Increased Productivity

**WinPICS** is designed for the PC platform with easy to use data management tools and integration with Microsoft Office applications. Take advantage of straightforward navigation, data loading and management, mapping and seismic view components. WinPICS is designed to follow industry workflows to help you increase your productivity and focus on the data of interest.

### Advanced Functionality

**WinPICS** provides fast and interactive mapping and data picking functionality to help you reach your exploration targets. With extremely fast display and navigation through seismic data elements, WinPICS offers many interactive on-the-fly postings that provide immediate seismic data feedback and help you more productively interpret your data. Utilize advanced line and signal matching tools, as well as diagnostic tools such as SMAC™, which helps resolve mis-tie problems from multiple data vintages.

### Unparalleled Support

As a local Calgary-based company with 260+ employees, Divestco is focused on providing a high-level of customer service. Our knowledgeable support personnel are located at our head office in Calgary and ready to serve. With decades of geological and geophysical software experience, our team of developers are continually seeking improvements in all aspects of our software. This commitment to our customers and our products is how Divestco has successfully serviced more than 800 companies doing work in 56 countries.

### Go Beyond Seismic with VistaBridge™

One of the major advantages of WinPICS over its competitors is VistaBridge; an integration of the GeoVista database browser into the WinPICS interface. Finding good data sources, purchasing and loading multiple file formats from public and third-party suppliers can be a lengthy, costly and stressful process. With VistaBridge, you can export complete, relevant and specific data instantly from GeoVista, giving you extra time to focus on what's important. You have direct and dynamic access to GeoVista, without ever leaving the WinPICS interface. Don't settle for piecemeal data, get the whole picture today and go beyond seismic.
