

# Geomatics Advisory Support (GAS)

Flexible Geomatics Support for Your Business

## The GAS Advantage:

Divestco Geomatics has been providing technical support, consulting and advisory services on spatially-related matters to the energy industry since 1981. GAS provides day-to-day Geomatics support, readily available, and non-project specific. Our breadth of global knowledge and expertise provides us with a unique opportunity to offer technical support both on domestic and international spatially-related matters.

## GAS Offerings

GAS provides you with local access to geodetic expertise to resolve or advise clients on spatially related matters, including but not limited to:

- Troubleshoot and provide solutions to technical inquiries and questions related to datums, projections, local grids, deviation surveys, and risk mitigation practices
- Outline specific country geodetic details relating to various datum and projection options along with the associated spatial risk associated through investigations as a Geomatics Parameter Sheet
- Confirmation and validation of geodetic information related to spatial data (SEGP1, SEGY, Shapefiles or geoTiffs, satellite imagery)
- Attend various meetings in the client work environment to understand current workstation and data status regarding spatial integrity
- Provide technical spatial support where required
- Support clients in an advisory role for project setup, field survey procedures; liaise with field staff and partners
- Representation at CAPP Geomatics Committee or other related meetings
- Support in other advisory roles as defined by the client

## Affordable Expertise

Divestco GAS Services offers you the opportunity to inexpensively outsource the role of a Geomatics specialist, without the hassles of multiple invoices. Divestco Geomatics provides a flexible invoicing model which can be offered monthly, quarterly or annually.

### Customized Education Sessions

Take advantage of customized education sessions that address the fundamentals of surveying and its geodetic components. Our experts develop modules to suit the interests of your team and educate on spatial data issues around the world.

The GAS service includes up to 4 sessions per year, customized to address specific project areas and related issues.

### Suggested Topics:

- GPS & Field Survey Technologies
- Ellipsoids, Datums, and Map Projections
- International Datums; based on your area of interest such as Peru, Colombia, etc
- Survey Systems in Western Canada
- Marine Seismic
- Lidar and Imagery
- Geospatial Data Integrity and Migration
- Workstation Data Formats (Compatibility)
- Explore the Potential of GIS and Remote Sensing
- Leveraging Google Earth Internationally: An Overview to Sustaining Spatial Data Integrity
- Seismic Survey Basics – Field Work (Full Day Course)
