GeoCarta®
GIS for All

Powerful and Easy to Use.
GeoCarta Streamlines the Exploration Process, Reduces Costs and Integrates Information.

GeoCarta is a single-point data access software solution that lets project teams explore, analyze, extract and map public and proprietary data with ease to make faster and more accurate decisions.

Using industry leading technologies, **GeoCarta** provides a modern, intuitive interface and access to common oil and gas workflows. Users are effective in a short period of time, regardless of experience or proficiency with GIS.

The GeoCarta Advantage

BENEFITS	FEATURES
EASY TO USE	▪ Minimal learning curve ▪ Intuitive navigation ▪ Assets and workflows accessible to all levels of users
INCREASED PROFITABILITY	▪ Eliminates the need for multiple applications ▪ Reduced duplication of effort ▪ Improves collaboration and saves time
UNIFIES DATA	▪ Leverages public and proprietary information simultaneously ▪ Single access to multiple datasets ▪ Accurately delivers analysis-ready data

GeoCarta®

GIS for All

GeoCarta allows GIS and non-GIS users to collaborate in the decision-making process by providing a shared open architecture behind two seamlessly integrated GIS deployment options: **Mapping** and **GIS**.

Ask for a Demo

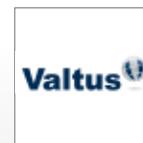

The Power of GIS in a Simple Mapping Platform

Providing industry standard mapping functions, **GeoCarta** is built using premium components and technologies, providing access to GIS through an easy-to-use intuitive mapping interface. **GeoCarta** features spatially aware tools for quick data selection, quick import capabilities to analyze external data types and direct access to all available GIS data types.

The Power of Esri ArcGIS for Professionals

Extending the power of ArcGIS Desktop across the exploration process, **GeoCarta** GIS simplifies complex tasks and allows GIS users to easily create and work with spatial data and deliver highly-detailed maps. The **GeoCarta** GIS extension features customizable and dynamic map annotations, single-click access to rich relational data and functions to easily search and analyze complex data systems.
