

# Express Database

## PPDM Wells & Land

### Divestco's Express Database offers the advantage of fully modeled PPDM compliant wells, combined with a comprehensive land database for Western Canada.

The data is sourced from Government offices and is updated monthly; enabling you to focus on building useful applications with consistent data, rather than the timely task of managing and loading data.

### Industry Standard PPDM Database

Divestco's Express Database provides up-to-date general well data, production data, injection data, AOF, BHOP, crown data, freehold polygons, land sale postings, reserve data, and gas analysis data in a PPDM 3.71 schema for the Western Canadian provinces of Alberta, Saskatchewan, British Columbia and Manitoba. The database is available in Oracle and SQL Server formats.

### Alberta

- General well data
- Tubulars
- Formations, DST and Log Summaries
- Production/injection history data
- Absolute open flow pressure (gas pressure) data
- Bottom hole oil pressure data
- Pipeline data
- Crown land and unit data
- Freehold polygons
- Land sale postings
- Hydrocarbon reserve data
- Facilities data
- Gas analysis data

### Saskatchewan

- General well data
- Tubulars

- Formations, DST and Log Summaries
- Production/injection history data
- Crown land and unit data
- Freehold polygons
- Land sale postings
- Hydrocarbon reserve data

### British Columbia

- General well data
- Tubulars
- Formations, DST and Log Summaries
- Production/injection history data
- Absolute open flow pressure (gas pressures) data
- Crown land and unit data
- Freehold polygons
- Land sale postings
- Hydrocarbon reserve data

### Manitoba

- General well data
- Tubulars
- Formations, DST and Log Summaries
- Production/injection history data

### All Provinces – Optional Data Sets

- Grid and culture spatial data
- Pipeline and Facilities

### System Requirements

Express Data requires a minimum of 40 Gigabytes of disk space in a relational database server. Additional capacity may be required to implement a complete solution.

- Oracle and SQLServer are supported
- Custom data export files are available by request.
