

# Log Digitizing

Leading Provider of Canadian  
and International Digitizing

Divestco's log digitizing process focuses on quality and rapid turnaround, delivering digital curves in the industry standard, LAS format.

We have digitized over **millions of curves** throughout the past 40 years, and have gained international experience with 56 countries.

## Turnaround

Divestco can provide one-day turnaround on all standard digitizing requests and our client services team will work closely with each customer to ensure all deadlines are met. Turnaround times do vary depending on the number of curves to be digitized and the depth of the well. Divestco is always willing to accommodate your rush job needs. One of our advantages is that we have the staff to handle large volume requests with incredible speed and efficiency. No job is too large!

## Job Tracking

Developed in collaboration with our clients, Job Tracking is a database system that tracks each job throughout production. At any point during the digitizing process, Divestco knows precisely where a job is, when it is due out of production and who is working on it. Through a web-based interface, customers are able to view all current and past jobs in the system.

## Specifications

All digital curves are delivered in industry standard LAS format. Metric curves are output to a standard of 0.1 meter depth intervals which enables comprehensive analysis of the curves as depth intervals are very tight. For imperial jobs, 0.5 feet depth intervals are used and we are able to accommodate requests for Imperial to Metric conversions and vice versa. All header information is highly detailed, enabling further in-depth analysis of the curves.

and International Digitizing

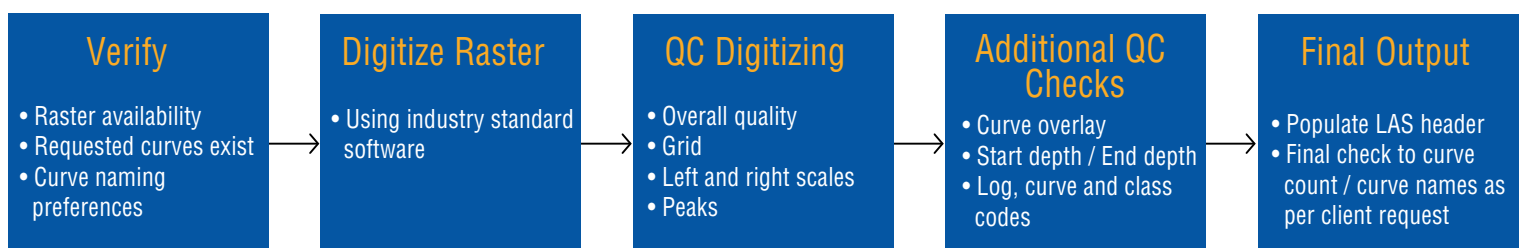

## Delivery Methods

Divestco offers flexibility in how you receive your digitized curves. Data can be emailed, uploaded through FTP or copied to CD for delivery. For EnerGISite users, Divestco offers Canadian proprietary digital log storage which hosts all proprietary digitized curves in a secure, on-line proprietary log file accessible 24/7 to Divestco clients.

## Quality Assurance

Every digitized curve is put through a rigorous quality control production process that ensures all customer specifications are met. At both the edit and output stages, Divestco confirms a number of items including; standardized curve names, scales, header information, depths, backups and curve accuracy to ensure that every digitized curve is completed accurately. We have a team of industry professionals with extensive well log experience dedicated to providing the highest quality results possible.
